8. EXPOSURE CONTROLS / PERSONAL PROTECTION

8.1 Control parameters

Preventive industrial and medical examinations must be carried out according to the application area.

Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. Instruction must be provided before employment and then at a minimum of once per annum thereafter.

An escape and rescue plan must be prepared when the location, scale, and use of the work-site so demand.

It must be assured that the workplace limit values are being maintained. If the limit values are exceeded, additional protection measures are necessary.

The measurements must be recorded and kept on file.

Safety Data Sheet

The number of employees who work with the hazardous substance must be kept to a minimum.

Only employees are permitted to enter the work areas. Signposting to this effect must be displayed

8.1.1 Occupational exposure limits

Components with workplace control parameters

- TLV (ACGIH) : 5 ppm, 7.5mg/m³ (Ceiling)
- PEL (OSHA): 5 ppm, 7 mg/m³ (Ceiling) EV (ONTARIO): 5 ppm CEV (Ceiling)

8.2 Exposure controls

- Adequate ventilation should be used during processing
- Risk of percutaneous absorption
- Substances for which local irritant effects determine the exposure limit value, also respiratory allergens

8.2.1 Appropriate engineering controls:

- Provide local exhaust ventilation to control dust/mist/vapors
- In the immediate working surroundings there must be: Emergency shower installed.
- Make available sufficient washing facilities.
- Provide eye shower and label its location conspicuously.
- See Section 7

8.2.2 Personal protection equipment

8.2.2.1 Eye / Face protection:

- Safety glasses with side shields.
- Wear chemical safety goggles.
- If the face is at risk a protective shield must also be worn
- Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lens or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly.

8.2.2.2 Skin protection

Hand protection

- The use of resistant protective gloves is recommended.
- The glove material must be sufficiently impermeable and resistant to the substance. Check the tightness before wear. Gloves should be well cleaned before being removed, then stored in a well ventilated location. Pay attention to skin care.
- Skin protection cremes do not protect as effectively against the substance as protective gloves. Therefore suitable protective gloves should be preferred as far as possible.
- Currently there is no information available regarding suitable glove materials.
- Ask the manufacturer for suitable materials.

- Protective suits have to be checked for embrittlement after each use.

Other protection

- Handle in accordance with good industrial hygiene and safety practice.

8.2.2.3 Respiratory protection
